

~ PVCu roofline products ~

no more painting - no more effort - no more maintenance

Imagine
the time saving

ADC *direct* 

Save time with

The ADC Direct range of roofline products will ensure that repainting becomes history. Not only will our range of soffits and fascias save you time they will also improve the kerbside appeal of your property and are available with suited guttering and downpipes.

Save Time

Add value

Add quality

and protect your property

Timber soffits and fascias need maintaining and over time will eventually need to be replaced - no matter how much effort has been made to maintain the quality of the timber; the rot will set in and cause damage to other parts of your property.

ADC Direct Roofline Soffits and Fascias will eliminate all these problems. As long as the PVC roofline products are attached to sound roof trusses they will last a lifetime - no rotting - no flaking - cracking or peeling - no colour loss. After fitting ADC Direct roofline products you can rest assured that the ladders will not be needed to climb the gable end with a paint brush in hand again. We also use a concealed ventilations system for all our soffits which prevents the build up of moisture in the roof space without the need for unattractive slotted soffits.

All our roofline products are available in a white, woodgrain or black finish. This is further enhanced by a range of decorative features and gables.

Imagine

no more painting

Fascias are available in three profiles - a simple bulhose, a decorative profile or a square edge.

With all ancillary products such as end caps, corners and even guttering matching your chosen profile - the ADC Direct roofline range will transform your roofline for the lifetime of your property.

Roofline will not only add value but add to the saleability of your property with enhanced looks - but also a low maintenance selling point. Roofline is not only for the present but will help you sell your property if you choose to in the future.

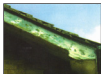

Bulhose

decorative

Before & After

square edge

- Full removal and replacement of roofline - or overlaid of existing timbers
- Moving back the tiles - Allowing full inspection of roof timbers and removal of debris
- Replacement of visible rotten timber - To prevent future decay
- Re-aligning of rafter end / feet - To ensure the entire run of fascia is straight and level.
- Use of 18mm thick, heavy fascia boards - Rigid and sturdy to prevent warping and cracking.
- Concealed ventilation - preventing the build up of moisture in the roof space.
- Eaves protection system - Which channels excess water into guttering rather than house structure.
- Integrated 'Bird Comb' - A safe, yet effective barrier to birds nesting in the roof space.
- On completion of the project all products are cleaned and polished, scaffolding promptly removed from site, site cleaned and all debris removed.
- All backed by a full 10 Year guarantee.

Guttering and Fallpipes

Gutters are available in either half round, square or ogee decorative profile, with fallpipes either round or square. To ensure co-ordination with other roofline products they are available in black, white or brown.

Ogee gutter with square fallpipe

Imagine

the difference

that cladding could make

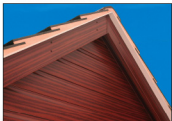

Traditional timber cladding is renowned for being difficult and time consuming to maintain. If your property has external cladding you could be spending valuable leisure time sanding, cleaning and repainting the exterior of your property. Additionally old rendered buildings can benefit from a PVCu cladding system - no more re-rendering, painting and maintenance.

ADC Direct cladding systems are available in four attractive styles and 3 colour options. Combined with soffits and fascias your property could become virtually maintenance free giving you more time, and ultimately relaxation.
